しつつ呼が世長末

① 准备结构样式 - 两个重叠的 svg 圆 & 百分比文字

```
<div class="percent">
  <svg>
   <circle cx="70" cy="70" r="70" />
    <circle id="circle" cx="70" cy="70" r="70" />
  </svg>
  <div class="number">
   <h3>
      <span id="percent">20</span>
      <span>%</span>
   </h3>
  </div>
</div>
```

准备两个重叠的 svg 圆 和 百分比文字

20 %

しつ)呼が世長末

① 准备结构样式 - 两个重叠的 svg 圆 & 百分比文字

```
.percent {
    position: relative;
    width: 150px;
    height: 150px;
}
.percent svg {
    width: 150px;
    height: 150px;
    height: 150px;
}
```

20 %

しつ)呼が世長家

② 定制圆环

```
.percent svg circle {
 fill: none;
 stroke-width: 10;
 stroke: #000;
 transform: translate(5px, 5px);
 stroke-dasharray: 440;
 stroke-dashoffset: 440;
.percent svg circle:nth-child(1) {
 stroke-dashoffset: 0;
 stroke: #f3f3f3;
.percent svg circle:nth-child(2) {
 stroke-dashoffset: calc(440 - 440 * (20 / 100));
 stroke: #21a0ff;
                      第二个圆,设置偏移,显示百分比进度 20%
```

20 %

しつ)呼が世長家

③ 百分比文字居中显示

```
.percent .number {
 position: absolute;
 left: 0;
 top: 0;
 width: 100%;
 height: 100%;
 display: flex;
 justify-content: center;
 align-items: center;
 color: #333;
 文字居中,设置颜色
```

しつつ・呼が世長家

③ 百分比文字居中显示

```
.percent .number span:nth-child(1) {
  font-size:48px;
}
.percent .number span:nth-child(2) {
  font-size:20px;
}
```

大功告成,加点JS 让他动起来吧

しつつ呼が世長宗

④ 动态设置百分比 (演示使用)

```
const percentBox = document.querySelector('#percent')
const circle = document.querySelector('#circle')
let percent = 20 // 声明百分比

// 每隔1.5秒, 进度条往上累加一个随机百分比

const timer = setInterval(() => {
    percent += Math.ceil(Math.random() * 30)
    if (percent > 100) {
        percent = 100
            clearInterval(timer)
    }
    // 设置样式
    percentBox.innerHTML = percent
    circle.style.strokeDashoffset = `calc(440 - 440 * (${percent} / 100))`
}, 1500)
```
